
CAPTURE ONE CH

Capture One CH was built on the same platform as the revolutionary and industry leading, Capture One Pro. Capture One CH is designed to support and enhance cultural heritage workflows from capture through post-processing by simplifying and automating post-production tasks.

MORE FEATURES

ICC Profiles for Cultural Heritage

Capture One CH comes preloaded with high accuracy ICC color profiles for the DT Photon series and for studio strobe. While custom in-situ profiling is supported you'll find the quality of the included CH Profiles built-in profiles match or exceed the most carefully made custom profiles.

CH Workspaces

Logical setup of tools customized to optimize CH workflows during preparation, production and file storage. They can be used by an admin or an operator and include the required capture and processing tools for specific Reflective or Transmissive materials.

Custom Color Editing

The Cultural Heritage color profiles provide extremely accurate color out of the box. However there are times where the "accurate" color is not desired. For instance, when placing two objects next to each other the color of one may bounce into the other. In such cases the Color Editor is a powerful solution, especially when combined with LAB Color Readouts and Overlay tools.

Metadata

Capture One provides a variety of tools for adding and editing technical metadata, descriptive metadata, and administrative metadata. Such metadata can be manipulated for individual images or groups of images (i.e. batch editing). Presets of metadata can be created to be added to speed entry of repeated fields. External metadata systems can be incorporated with a robust set of metadata scripting commands.

A Quantum Leap in Productivity

Capture One CH excels at batch image adjustment, batch quality assurance, and batch processing. Its industry-leading raw processing engine allows precise and faithful reproduction, or subjective enhancement of your images. It provides the powerful toolkit required to deliver images fine tuned for reproduction, presentation, digital asset management, archiving, and much more.

Batch Crop Manipulator & Page Splitting

Increase, decrease, or shift the crop on an unlimited number of images at once. For instance, generate a derivative with and without the Object Level Target.

Page Splitting handles 2-up book scanning, including sweeping the gutter on thicker books.

Capture Resolution Rule

Allows marking a known length in inches or centimeters and calculating the exact capture resolution, so that the camera-to-subject distance can be adjusted and the required resolution can be reached.

Improved Negative Conversion Algorithms

Capture One CH revolutionized the conversion of Color Negatives providing excellent conversion of Monochromatic Negatives including those with high dynamic range such as Glass Plate Negatives.

Adjustable Highlight/Shadow Clipping Targets

Under [Capture One > Preferences > Exposure > Auto Levels Clipping Threshold] the user can now set the threshold for automatic adjustments. This is especially helpful in the automatic adjustment of photographic transmissive materials such as color negatives and black and white negatives
